

**Coaster Color Design Tile Project**  
**45 possible points**

**Name:**

This project will consist of creating 2 4X4 tile coasters implementing color theory (schemes and groups). Using the template provided you will create designs on paper. (colored pencils, markers, chalk, or crayons). Feel free to use images from the Internet as an inspiration/guide. (Image size that will fit template is 3.5 height and 3.5 width when formatting). Option: For those outstanding artists, the design may be drawn directly on the tile using sharpie permanent markers or acrylic paint.

You will complete **four** (4) different sample paper designs as rough copies. Once you have completed these, obtain instructor approval; select two favorite designs and ceramic tiles. See samples provided for color choices. Your paper designs will be affixed to the tile using Mod Podge glue.

After completing your coasters, compose one 4-6-sentence paragraph for EACH of your 2 coasters. Include what color scheme or group you selected. Explain how you incorporated the colors into your design. Reflect as to why you selected the tile and felt colors. Describe the overall effect you were trying to achieve with your tiles. Your explanation must be word-processed.

**Assessment Checklist:**

4 Samples created and OK'd by instructor	20 points
Coaster 1 described well and clearly represented color scheme/group	10 points
Coaster 2 described well and clearly represented color scheme/group	10 points
Neatness – no folds, tears, bubbles	5 points
